Mr. Richard Marzolf

NON RESPONSIVE

Dear Mr. Marzolf:

In your telephone conversation with Mr. Gary Klepper, Chief of the Remedial Action Section's Site Assessment Unit, you requested information concerning the Winchester Disposal Site in St. Clair County. A review of the file reveals the following:

1. Site was in operation for approximately 25 years.
2. No records were kept concerning what type of, or how much waste was received.
3. Approximately a dozen 55-gallon drums exposed at the site, the contents of which are unknown, with some of these leaking.
4. The site is located adjacent to a marshland and is within the 100-year flood plain.
5. The groundwater at the site appears to be protected by a continuous clay layer approximately 100 feet thick.

Also enclosed is a copy of the Michigan Environmental Response Act #307 Priority List and a copy of the Winchester Disposal site description. If I can be of further service in this matter, I can be reached at (517) 373-4803.

Sincerely,

Brian G. Page, Environmental Engineer
Remedial Action Section
Groundwater Quality Division
(517) 373-4803
